

Please call for a free, fully functional 7 day evaluation copy of **FASTFORM** or **FASTFORM Advanced**.

(262) 938-9316  
[www.AccurateDieDesign.com](http://www.AccurateDieDesign.com)

Please request a copy of the article that we were asked to write for Metalforming Magazine that appeared in their June, 2005 issue that focuses on the 3D design and forming analysis for this part.

The black strip is what we provided to our customer based on the **FASTFORM Advanced** analysis.

The red is the actual development.

The photograph of this part looks as though it is upside down from how it is in the strip - but it is positioned correctly. The blank moves dramatically as it is formed as you can see, but the blank is still incredibly accurate - within about 0.060" on average, and all in one direction.

5 - 15 minutes to do the analysis  
2 - 4 hours for training (included)  
\$12,000 or \$18,000 for the software (depending on package chosen)
